## STANDARD OPERATING MODES

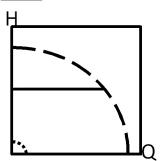

### CONSTANT SPEED

The pump maintains a constant speed at any flow rate. The desired speed is set on the interface panel of the pump.

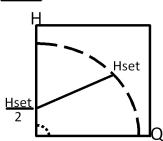

### CONSTANT PRESSURE ( $\Delta p_c$ )

The pump maintains a constant differential pressure at any flow demand until the maximum speed is reached. The desired head of the pump can be set via user interface. Recommended for use in systems with small or constant pressure losses.

### PROPORTIONAL PRESSURE ( $\Delta p_v$ )

The differential pressure continuously increases or decreases based on the flow demand. The set point head can be set on the pump user interface. Use for systems with large pressure losses.

### NIGHT MODE

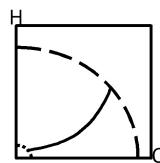

The pump will automatically reduce speed when there is an abrupt change in fluid temperature. The change in fluid temperature is from a boiler operating in night time setback mode. The built-in temperature sensor is used. (Fixed Speed, Constant Pressure, Proportional Pressure)

## INPUT SIGNALS

- I One 0-10V (Analog): Speed Control by external controller
- I One 4-20mA (Analog): Connection with an external pressure sensor for the pressure control mode (two different pressure sensor ranges: 0-15 PSI and 0-30 PSI)
- I One external temperature sensor input for DifferentialTemp operating mode. Sensor Type KTY38 PN:104502
- I One built-in temperature sensor for Set Point Temp and Differential-Temp operating mode.

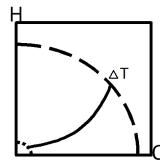

## TEMPERATURE INFLUENCED OPERATING MODES

### SET POINT TEMPERATURE ( $\Delta p_T$ )

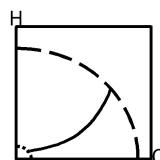

The nominal differential pressure set point is modified based on the fluid temperature. Uses the built-in temperature sensor.

### SET POINT TEMPERATURE (T)

The pump maintains a constant temperature in a system, such as domestic hot water system or a single temperature heating system. Uses the built-in temperature sensor.

### DIFFERENTIAL TEMPERATURE ( $\Delta T$ )

The pump maintains a constant differential temperature between the built-in and external temperature sensors.

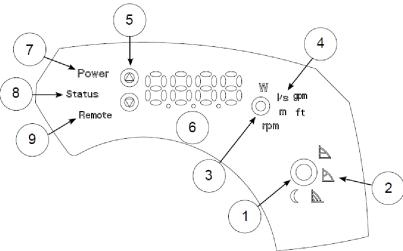

**INPUT RELAY:** Normally Open Contract Relay for Pump Start/Stop function which can be used with any thermostat.

## REMOTE BUILDING MANAGEMENT SYSTEM CAPABILITIES

- I The pump can be monitored or controlled by a signal from BMS (Building Management System). Built-in protocols are BACnet and Modbus. Direct connection to a PC is available.
- I An optional Wi-Fi module can be added to create a short range Wi-Fi field for remote connection to the pump. An internet browser or an App can be used to program the advanced settings. Module PN: 104500

**OUTPUT RELAY:** Normally Open Dry Contact Relay for Fault Mode indication.
